

ABSTRACT OF THE DISCLOSURE

000290" 5262655d

5 A method and a wireless communication control
apparatus for handing off a mobile station in a mobile
communication system including at least two wireless base
stations. A handoff threshold which is set in the mobile
station is varied according to quality of a wireless link
between the mobile station and a first wireless base
station which currently controls the mobile station. Then,
10 the processing for handing off the mobile station from the
first wireless base station to a second wireless base
station is performed based on the handoff threshold.
